

	A	B	C	D	E
1	eBay				
	Allowable Values				
	Certain fields inside the template must contain a set of allowable values and will fail if a value is not recognized.				
	The allowable values for fields that are required for all products are listed at https://developer.ebay.com/devzone/merchant-products/mipng/user-guide-en/default.html#definitions-combined-feed.html				
2	For fields that are required based on product category, the allowable values for those can be found at https://www.frootion.com/ebay-category-feature-finder-tool.html . A free account will need to be setup to access the category finder tool.				
3	Field	Description	TC Mapping Notes	Data Type	Required/Optional
4	Product ID				Required
5	eBay Item ID	Defines the eBay product identifier		string	Optional
6	Location	Indicates the geographical location of the item (along with the value in the Country field). When you revise a listing, you can add or change this value only if the listing has no bids (or no items have sold) and it does not end within 12 hours.			Optional
7	SKU	Stock keeping unit (SKU) identifier. Each SKU must be unique across your entire inventory.	Stock keeping unit (SKU) identifier. Each SKU must be unique across your entire product line.	string	Required
8	Primary Category ID	Identification number of the eBay category. See Category Lookup Tool under Tools and Sandboxes at the top of this page.	Can use following site that requires a free account for category ID lookup. Category ID also drives which attributes above are required to be present for the product. https://www.frootion.com/ebay-category-feature-finder-tool.html	integer	Required
9	UPC	Defines the standard product identifier		string	Optional
10	ISBN	Defines the standard product identifier		string	Optional
11	EAN	Defines the standard product identifier		string	Optional
12	MPN	Defines the standard product identifier		string	Optional
13	Brand	Defines the product brand		string	Optional
14	Quantity	For a fixed-price listing, the Quantity value indicates the number of identical items the seller has available for sale in the listing			
15	Title	The title of the listing. If you have a longer title, we recommended that you set the full-length title to a CustomField so that it can be used in your product's description template.	80 character limit	string	Required
16	Description	Text that accurately and completely describes the product. Can be one or more paragraphs.	Allows HTML descriptions with tables, pictures, etc	string	Required
17	Subtitle	Additional product information that is shown below the product title.	55 character limit	string	Optional
18	Condition ID	Select the condition of the product from the list of choices.	Has set of specific allowable values	string	Required
19	Condition Description	Additional information about the item condition. Use this field to supplement the standard condition description, such as USED. This field is optional, must be a text string, and doesn't have any character limits.		string	Optional
20	Variation Specifics Name 1-5	List of attributes on which the products in the group vary on. Used with Variation Attributes. Limit of 5. Example: {Color, Size}		string	Conditional (Required for MSKU)
21	Variation Specifics Value 1-5			string	Conditional (Required for MSKU)
22	Picture URL 1-24	For listing single SKU picture URLs	One URL per column. 12 Images max for all listings. 24 images allowed for eBay motors. New URL needed for updated images for eBay to know image changed. Min photo size is 500x500 max 9000x9000, max 12 MB per image. File types - JPEG, PNG, TIFF, BMP, GIF	string	Required
23	Group URL	Used for Multi SKU pictures.	Used for Multi SKU. Each picture URL is separated by ' '. First URL listed is used for main picture. (www.server.com\images\image1.png www.server.com\images\image2.png)	string	Conditional (if using MSKU)
24	Shipping Type	The shipping cost model offered by the seller. This is not returned for various calls since shipping type can be deduced: if a CalculatedShippingRate structure is returned by the call, the shipping type is Calculated. Otherwise, it is one of the other non-Calculated shipping types.		string	Optional
25	Shipping Service	This enumeration value indicates a specific domestic shipping service option being offered by the seller to ship an item to a buyer who is located within the same country as the item. This field is required to identify each domestic shipping service option that is specified with a ShippingServiceOptions container. Values can be found https://developer.ebay.com/Devzone/XML/docs/Reference/eBay/types/ShippingServiceCodeType.html		string	Optional
26	Shipping Service Priority	This integer value maps the particular instance of the ShippingServiceCostOverride container to the domesticShippingPolicyInfoService or intlShippingPolicyInfoService container of the Business Policies shipping profile. The ShippingServicePriority value should match the sortOrderid value for the matching shipping service in the Business Policies shipping profile. If overriding the shipping costs for a domestic shipping service, the ShippingServiceType field should be set to 'Domestic', and to override the shipping costs for an international shipping service, the ShippingServiceType field should be set to 'International'.		string	Optional

	A	B	C	D	E
3	Field	Description	TC Mapping Notes	Data Type	Required/Optional
27	Shipping Service Cost	The base cost of shipping the item using the shipping service specified in the ShippingService field. In the case of a multiple-quantity, fixed-price listing, the ShippingServiceAdditionalCost field shows the cost to ship each additional item if the buyer purchases multiple quantity of the same line item.		string	Optional
28	Shipping Service Additional Cost	You can set up to four shipping options in your own country and up to five shipping options to ship to other countries.			Optional
29	Free Shipping	This boolean field indicates whether or not the corresponding domestic shipping service option is free to the buyer. In an Add/Revise/Relist call, free shipping can only be offered for the first specified shipping service (so, the corresponding ShippingServicePriority value should be 1 or included first in the call request). If 'free shipping' is for any other shipping service, this field is ignored.		string	Optional
30	Originating Postal Code	The postal code for the location from which the package will be shipped. A postal code is required for calculated shipping. This field is not necessary if a postal code is already specified through the Item.PostalCode field. If a postal code is included in both fields, the value in Item.PostalCode field is used, and the value in OriginatingPostalCode is ignored.		string	Optional
31	Dispatch Time Max	Specifies the maximum number of business days the seller commits to for preparing an item to be shipped after receiving a cleared payment. This time does not include the shipping time (the carrier's transit time).		string	Optional
32	Measurement Unit	The unit of measure for shipping weight and size.	Has set of specific allowable values	string	Conditional
33	Package Length	Measurement of the longest side of the package. Requires the Measurement System field to have a value.		decimal	Conditional
34	Package Width	Measurement of the shortest side of the package. Requires the Measurement System field to have a value.		decimal	Conditional
35	Package Height	Top to bottom measurement of the package. Requires the Measurement System field to have a value.		decimal	Conditional
36	Weight Major	The high whole number portion of the shipping weight. For example, for a shipping weight of 3 lbs, 8 oz., enter 3.		decimal	Conditional
37	Weight Minor	The low whole number portion of the shipping weight. For example, for a shipping weight of 3 lbs, 8 oz., enter 8.		decimal	Conditional
38	Shipping Package	The type of shipping package used to ship the product. Specify the Package Type if calculated shipping is used.	Has set of specific allowable values	string	Conditional
39	Payment Methods	Each PaymentMethods field identifies a payment method that can be used by the buyer to pay for the item. Valid values can be found at https://developer.ebay.com/Devzone/XML/docs/Reference/eBay/extra/a/dfxdprctm.rqst.itm.pymntmthds.html		string	Optional
40	Paypal Email Address	This is the seller's PayPal payment email address, and this field is required in an Add/Revise/Relist call if PayPal is specified as a PaymentsMethod value.		string	Optional
41	Site			string	Optional
42	Site ID	The unique identifier of the sales channel, such as EBAY_US, EBAY_UK, or EBAY_DE. You can list the same item/SKU on multiple eBay sites / channels by copying the item to another line in the feed file and changing the channelID. Can be empty if only selling on one channel	Has set of specific allowable values	string	Conditional
43	Country	This two-digit enumeration value indicates the country of the seller's registration address. Applicable values can be found at https://developer.ebay.com/Devzone/XML/docs/Reference/eBay/extra/a/dfxdprctm.rqst.itm.cntry.html		string	Optional
44	Listing Type	The selling format of the eBay listing, such as auction (indicated with Chinese value), fixed-price (indicated with FixedPriceltem value), or classified ad (indicated with AdType value). Valid values are AdType, Chinese, FixedPriceltem, and LeadGeneration.		string	Optional
45	Listing Duration	Describes the number of days the seller wants the listing to be active (available for bidding/buying). The duration specifies the seller's initial intent at listing time. Applicable values can be found https://developer.ebay.com/Devzone/XML/docs/Reference/eBay/types/ListingDurationCodeType.html		string	Optional
46	Error Language	Use ErrorLanguage to return error strings for the call in a different language from the language commonly associated with the site that the requesting user is registered with. Some examples would be en_US, en_GB, fr_CA, de_DE.		string	Optional
47	Returns Accepted Option	This field indicates whether or not the seller accepts returns. Applicable values are ReturnsAccepted or ReturnsNotAccepted. When set to ReturnsAccepted, this option indicates the seller allows items to be returned. Specify ReturnsNotAccepted for a listing if returns are not accepted.		string	Optional

	A	B	C	D	E
3	Field	Description	TC Mapping Notes	Data Type	Required/Optional
48	Refund Option	This field indicates how the seller compensates buyers for returns. MoneyBack is the only supported value for all marketplaces except for the US. On the US marketplace, you can set this value to either MoneyBack or MoneyBackOrReplacement. MoneyBackOrReplacement can be used by sellers that have the depth of inventory to support an exchange for an identical item. However, ultimately, it is up to the buyer on whether they want money back or a replacement item.		string	Optional
49	Returns Within Option	Specifies the amount of time the buyer has to return an item. The return period begins when the item is marked "delivered" at the buyer's specified ship-to location. Most marketplaces and categories support 30-day and 60-day return periods. eBay sites often set 30-days as the default value for this field and sellers are obligated to honor the values that are set for a listing. This value is required if ReturnsAcceptedOption>ReturnsAccepted.		string	Optional
50	Shipping Cost Paid by Option	This option specifies whether the buyer or the seller pays for return shipping charges. Accepted values are Buyer or Seller. eBay sites often set Seller as the default value for this field, and sellers are obligated to honor the values that are set for a listing. This value is required if ReturnsAcceptedOption>ReturnsAccepted.		string	Optional
51	Buy It Now Price			string	Optional
52	Currency	In an Add/Revised/Relist/Verify call, this required three-digit enumeration value defines the currency associated with the listing site. The item price and all costs passed in the call request will be using this currency. Similarly, the listing fees and other cost-related data will be using this currency. Since the Trading API can only be used for a select number of eBay sites, only a subset of values are supporting when adding/revising/relisting an item. These supported values are discussed in the top section of CurrencyCodeType.		string	Optional
53	Maximum Quantity	The maximum quantity of a product that one buyer can purchase in a 10-day period.		integer	Optional
54	Discount Price Info	This container provides information for an item that has a Strikethrough Price (STP) or a Minimum Advertised Price (MAP) discount pricing treatment. STP and MAP apply only to fixed-price listings. STP is available on the US, eBay Motors, UK, Germany, Canada (English and French), France, Italy, and Spain sites, while MAP is available only on the US site.		string	Optional
55	Minimum Advertised Price	The Minimum Advertised Price (MAP) is an agreement between suppliers (or OEMs) and retailers stipulating the lowest price a product is allowed to be advertised. You can offer prices below the MAP through other discounts. The value specified in this field won't affect other products in multi-variation listings.	Has set of specific allowable values	decimal	Optional
56	Minimum Advertised Price Exposure	For MinimumAdvertisedPrice (MAP) listings only. A seller cannot show the actual discounted price on eBay's View Item page. Instead, the buyer can either click on a pop-up on eBay's View Item page, or the discount price will be shown during checkout. Applicable values are DuringCheckout, None, PreCheckout		string	Optional
57	Use Tax Table	Indicates whether the seller's tax table is to be used when applying and calculating sales tax for an order line item. A sales tax table can be created programmatically using the SetTaxTable call, or it can be created manually in My eBay's Payment Preferences. If UseTaxTable is set to true, the values contained in the seller's sales tax table will supersede the values contained in the Item.ShippingDetails.SalesTax container (if included in the request).		string	Optional
58	Sales Tax Percent	This float value is the sales tax percentage rate applicable to the corresponding tax jurisdiction (US state or Canadian province). Sellers are responsible for providing accurate sales tax rates for each jurisdiction. This sales tax rate comes into play when a buyer from that tax jurisdiction makes a purchase from the seller. The value passed in is stored with a precision of 3 digits after the decimal point (###.###).		string	Optional
59	Sales Tax State	This is the unique, two-digit identifier of the tax jurisdiction (such as 'CA' for California). To retrieve all two-digit identifiers for all states/territories/provinces for a site, a seller can either use a GetTaxTable call with DetailLevel set to ReturnAll, or they can use the GeteBayDetails call with DetailLevel name set to TaxJurisdiction. Please note that both GetTaxTable and GeteBayDetails calls use a JurisdictionID field to express these tax jurisdiction identifiers instead of SalesTaxState, but the values used in these fields are the same.		string	Optional
60	Item Specifics Name	Attribute element contains name key and value pairs describing the product attributes. Limit of 30.	Attributes are required for certain categories. Example Brand, Color, Size, Size Type are all required attributes for category 15687. Which fields are required can be found using the following site that provides a look up tool. Sign up a free account to access information. https://www.frooition.com/ebay-category-feature-finder-tool.html	string	Conditional (depending on the category)
